

The final app: Soft-clinical (IBM Plex, cool gray, coral). Four messy stages – Learn → Practice → Guided → Solo. Screens: 2a Decks · 2b Study (three separate score dials + centered concept tree) · 2c Session (each step discloses down a single screen; grading rides at the bottom of graded cards) · 2d Builder.

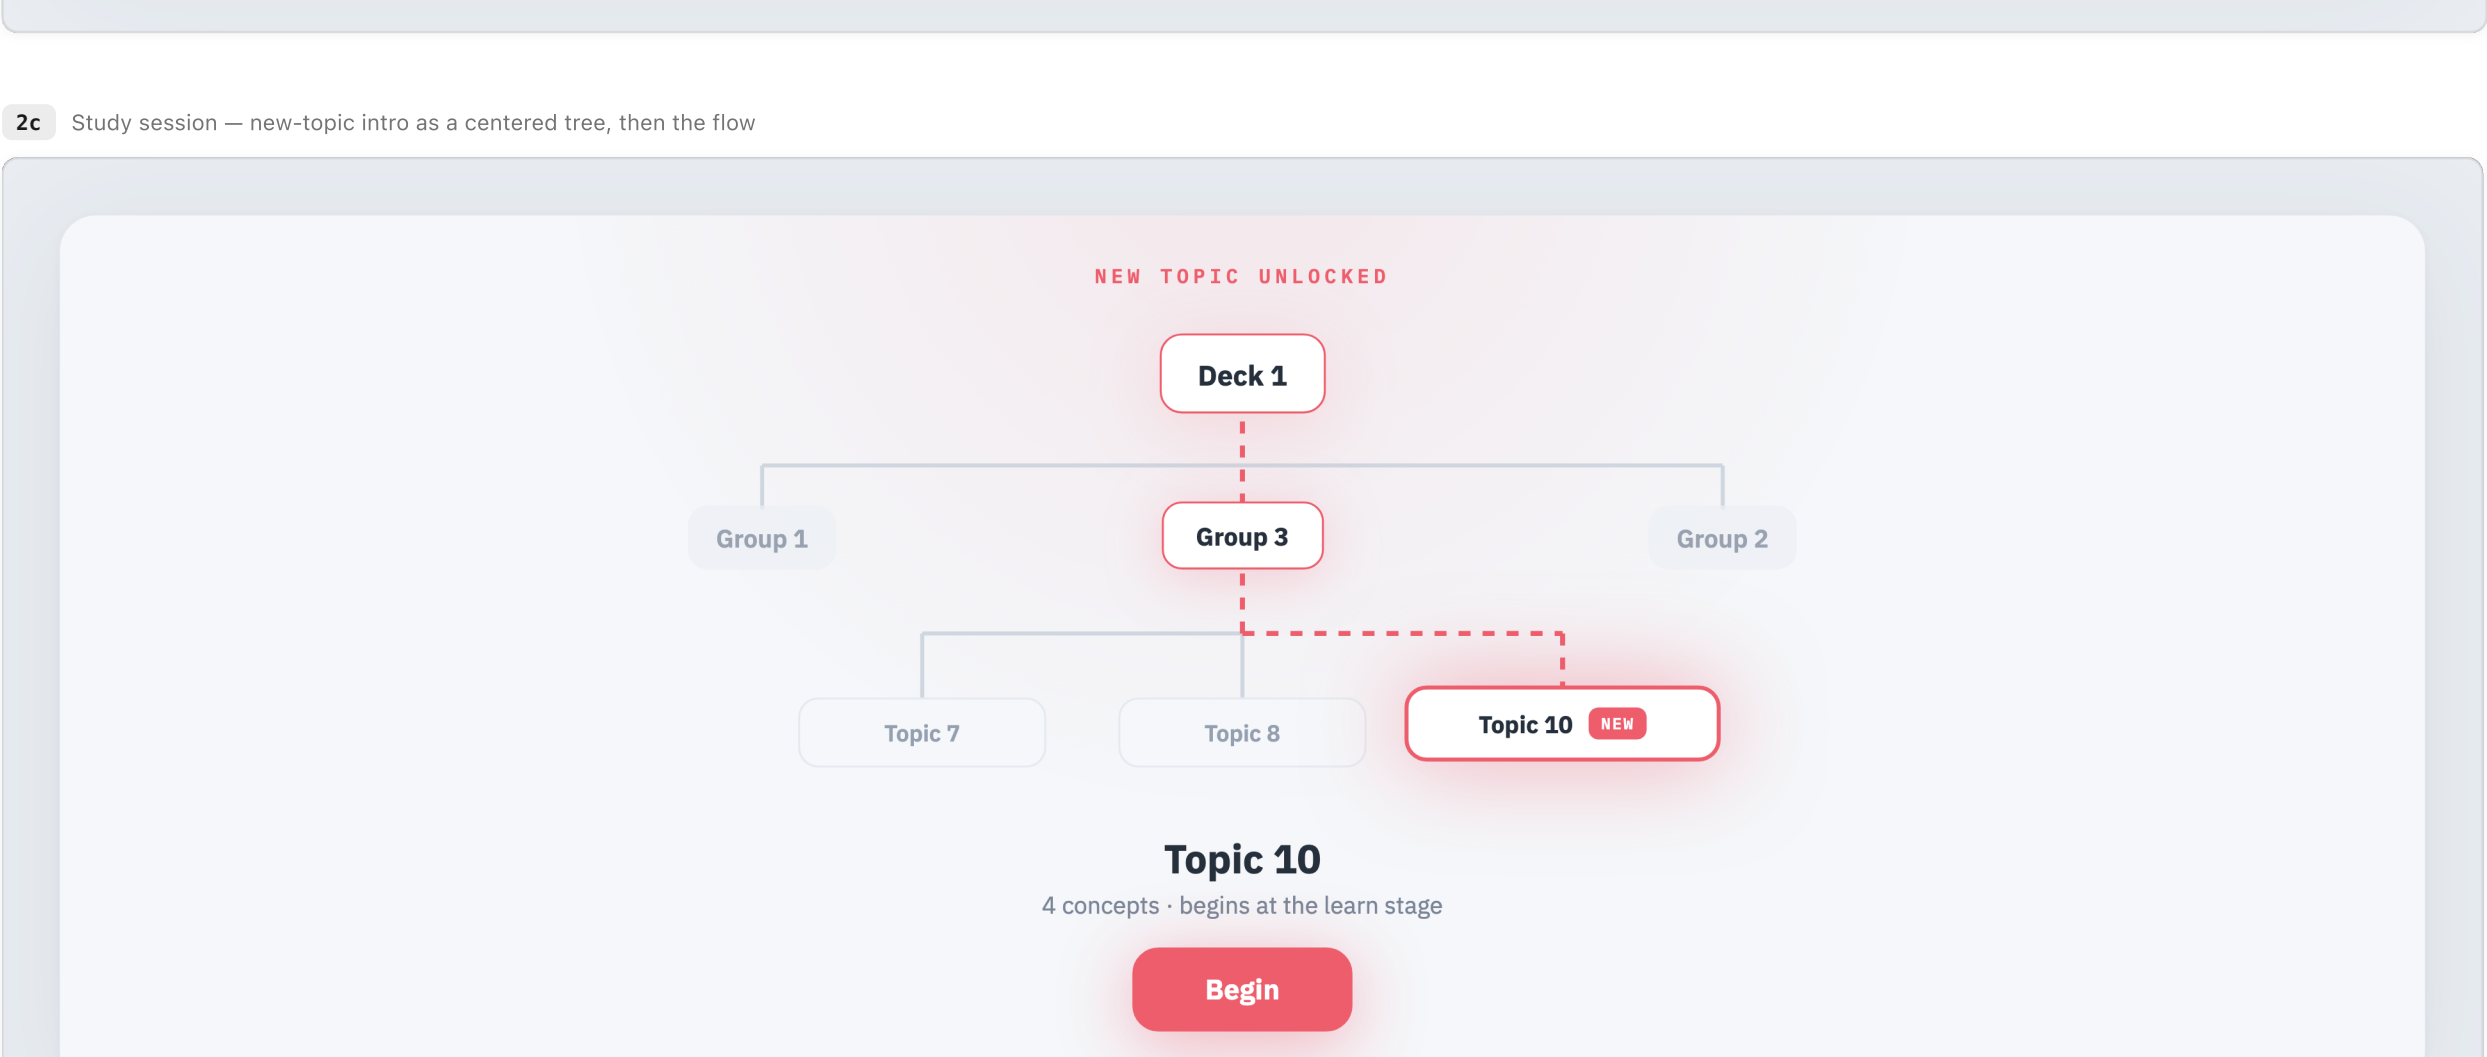

2a Decks home – completion bar only · Study + Details

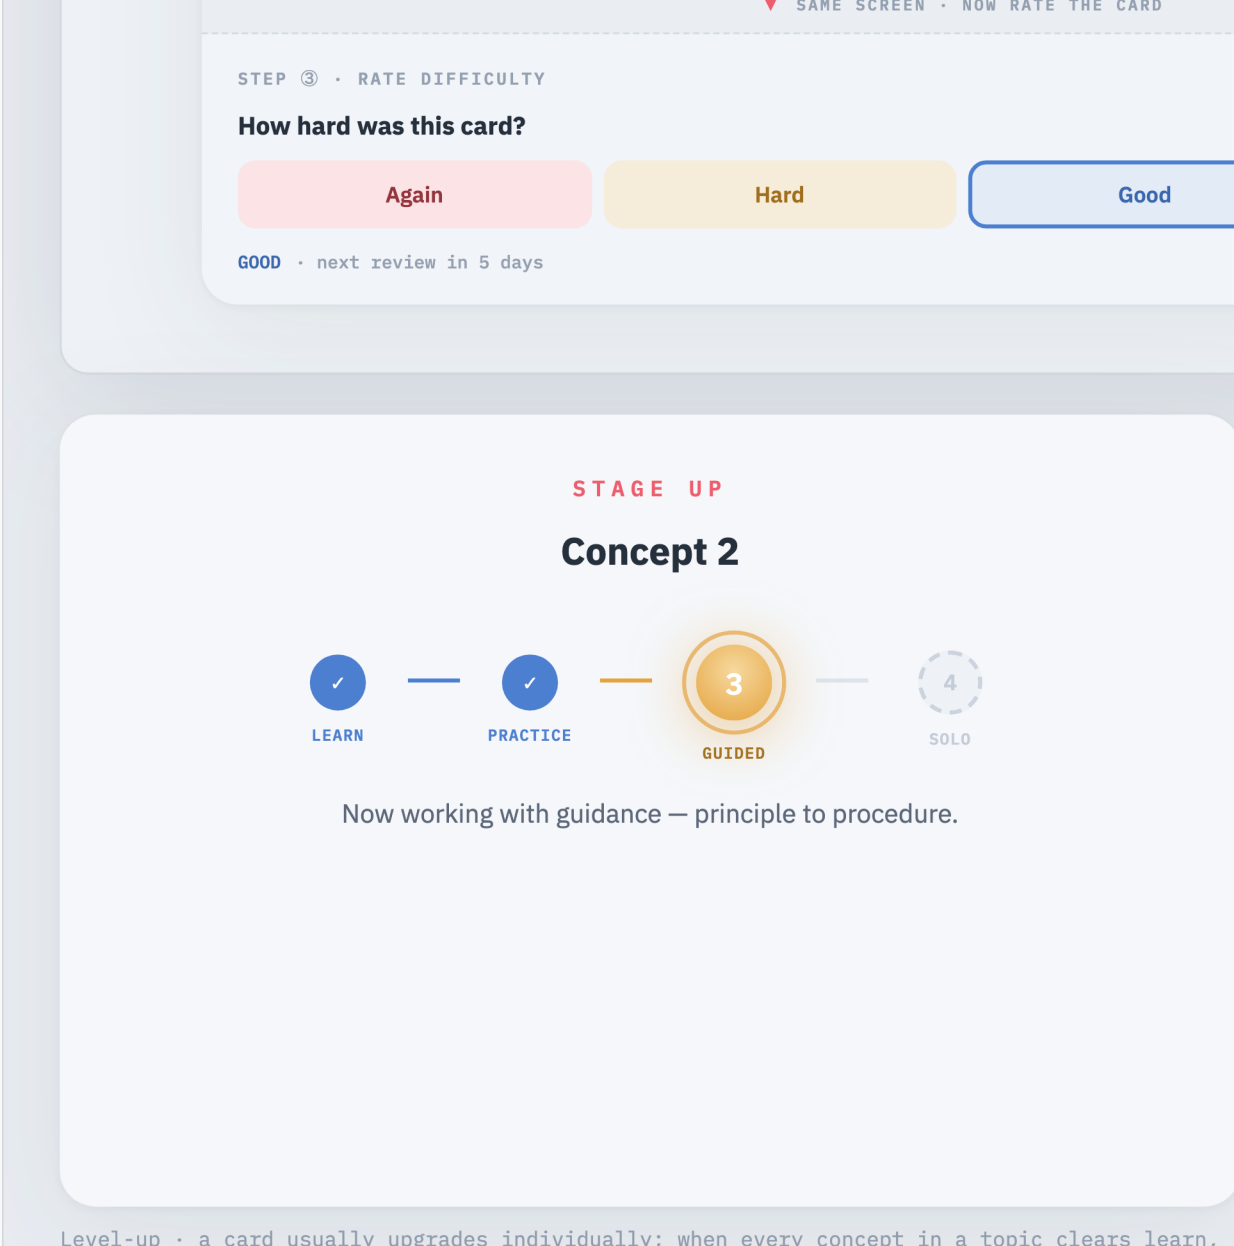

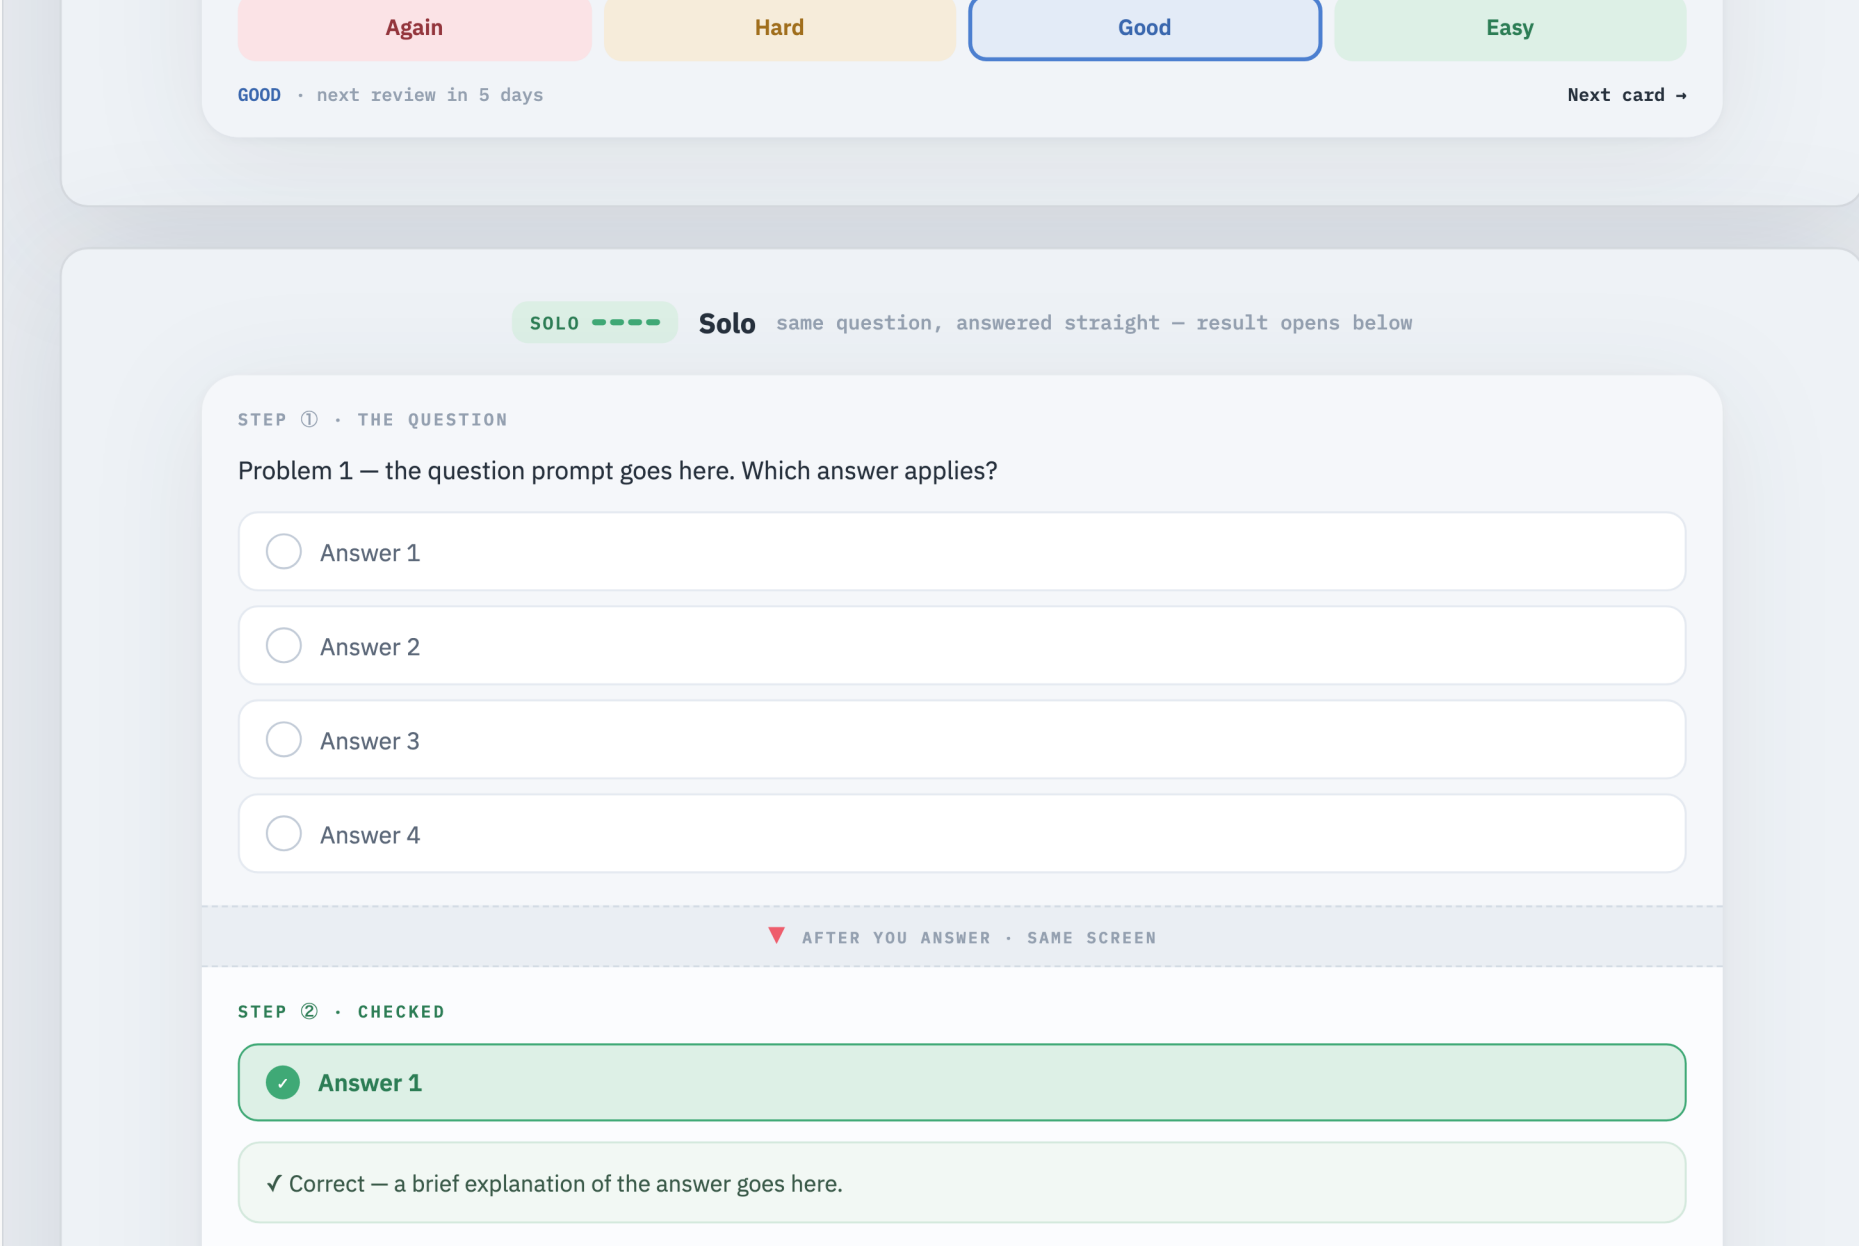

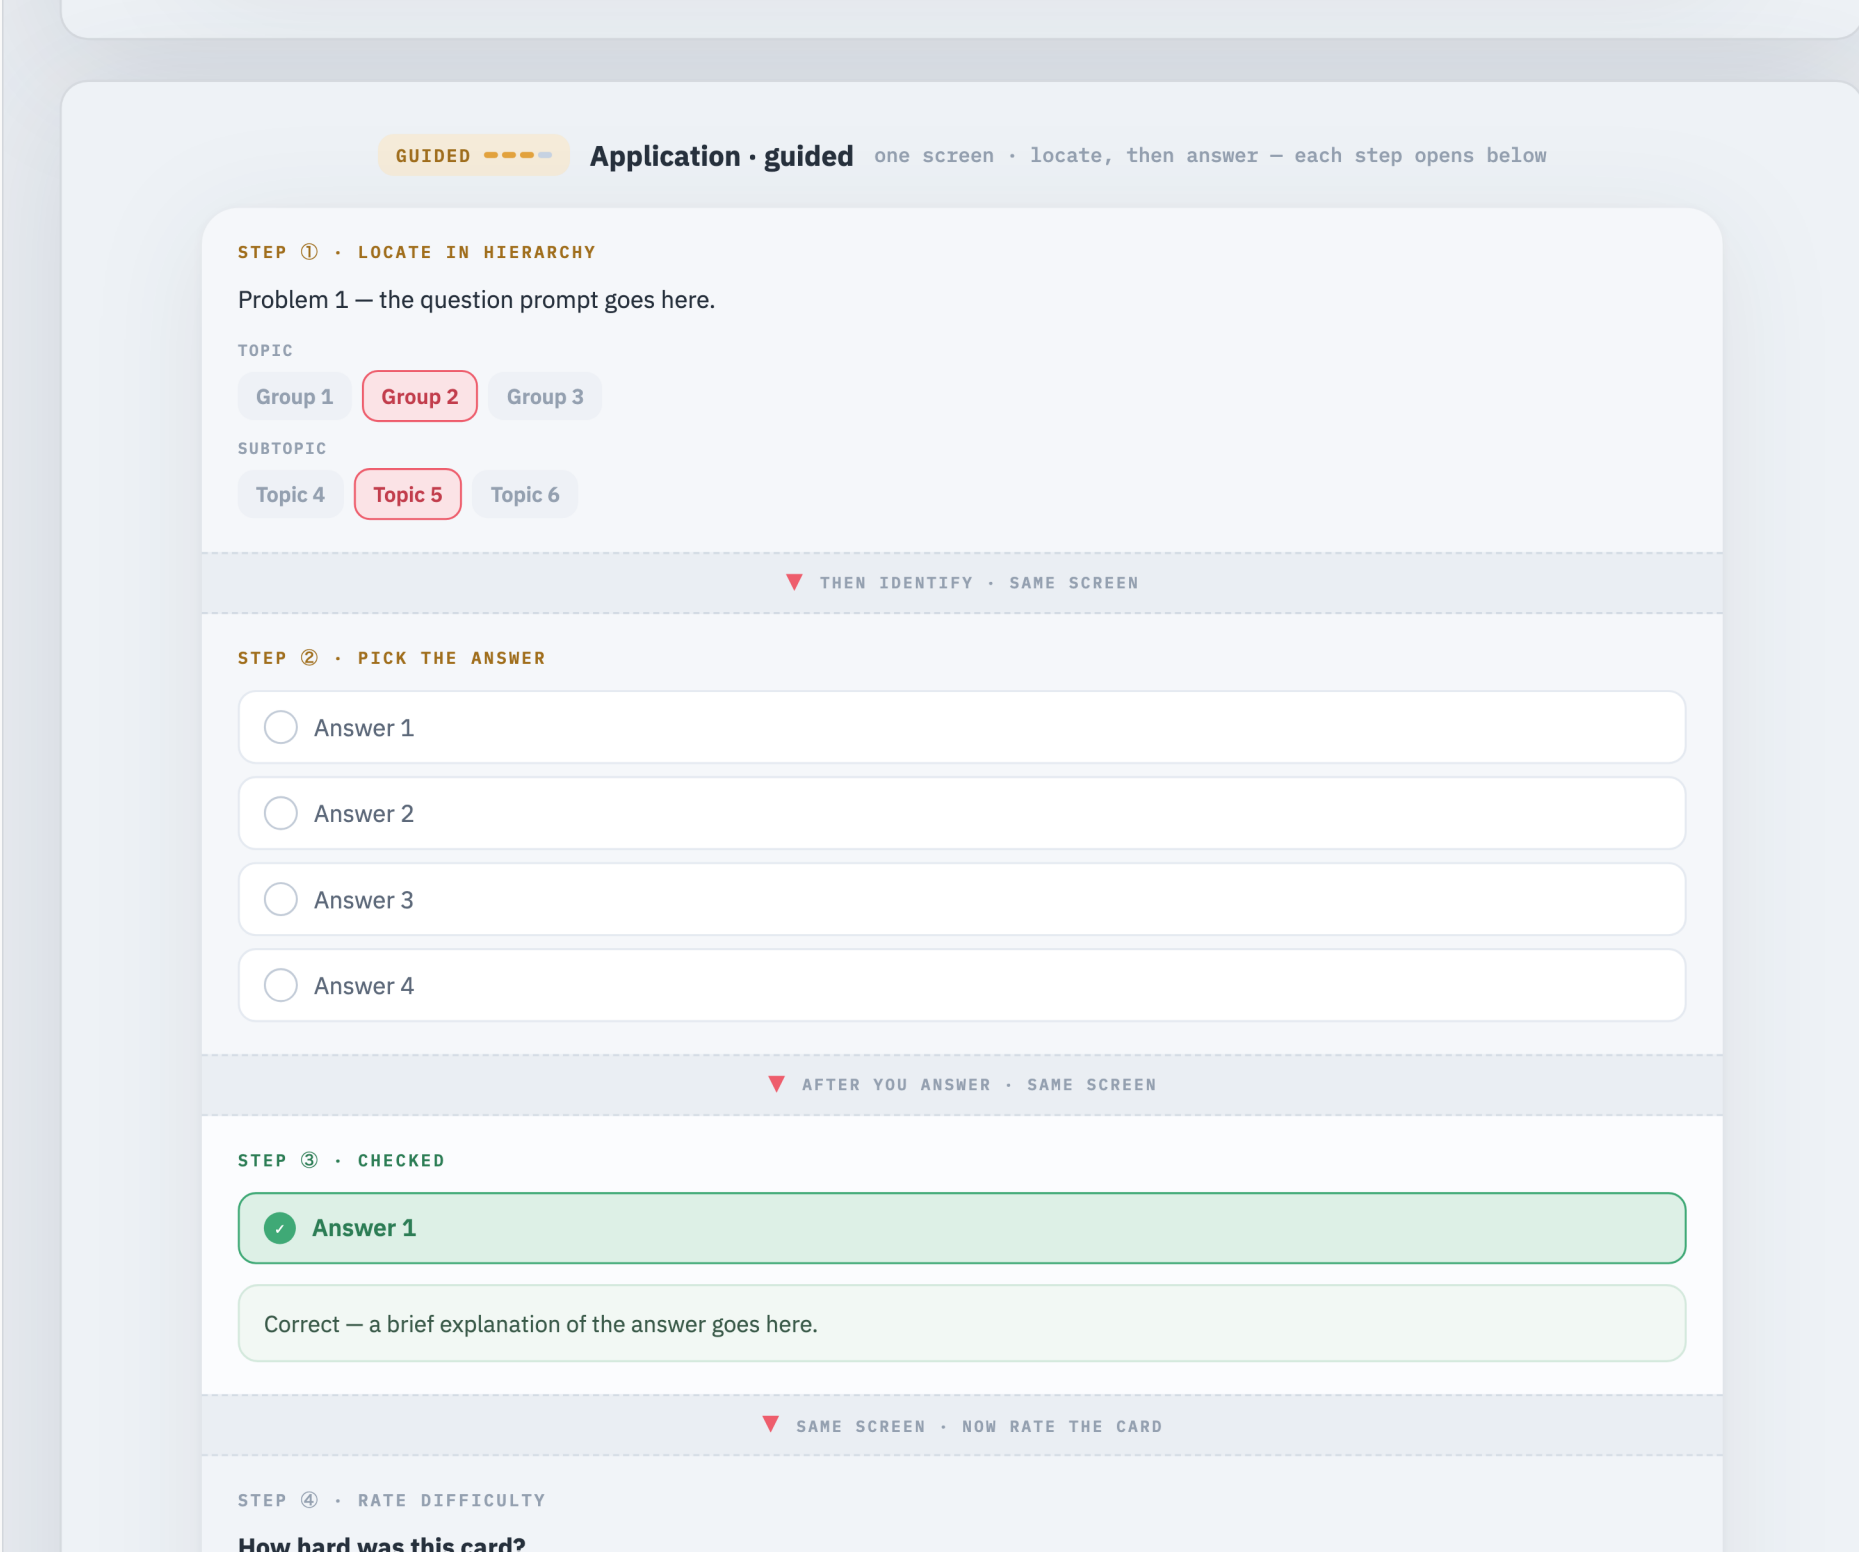

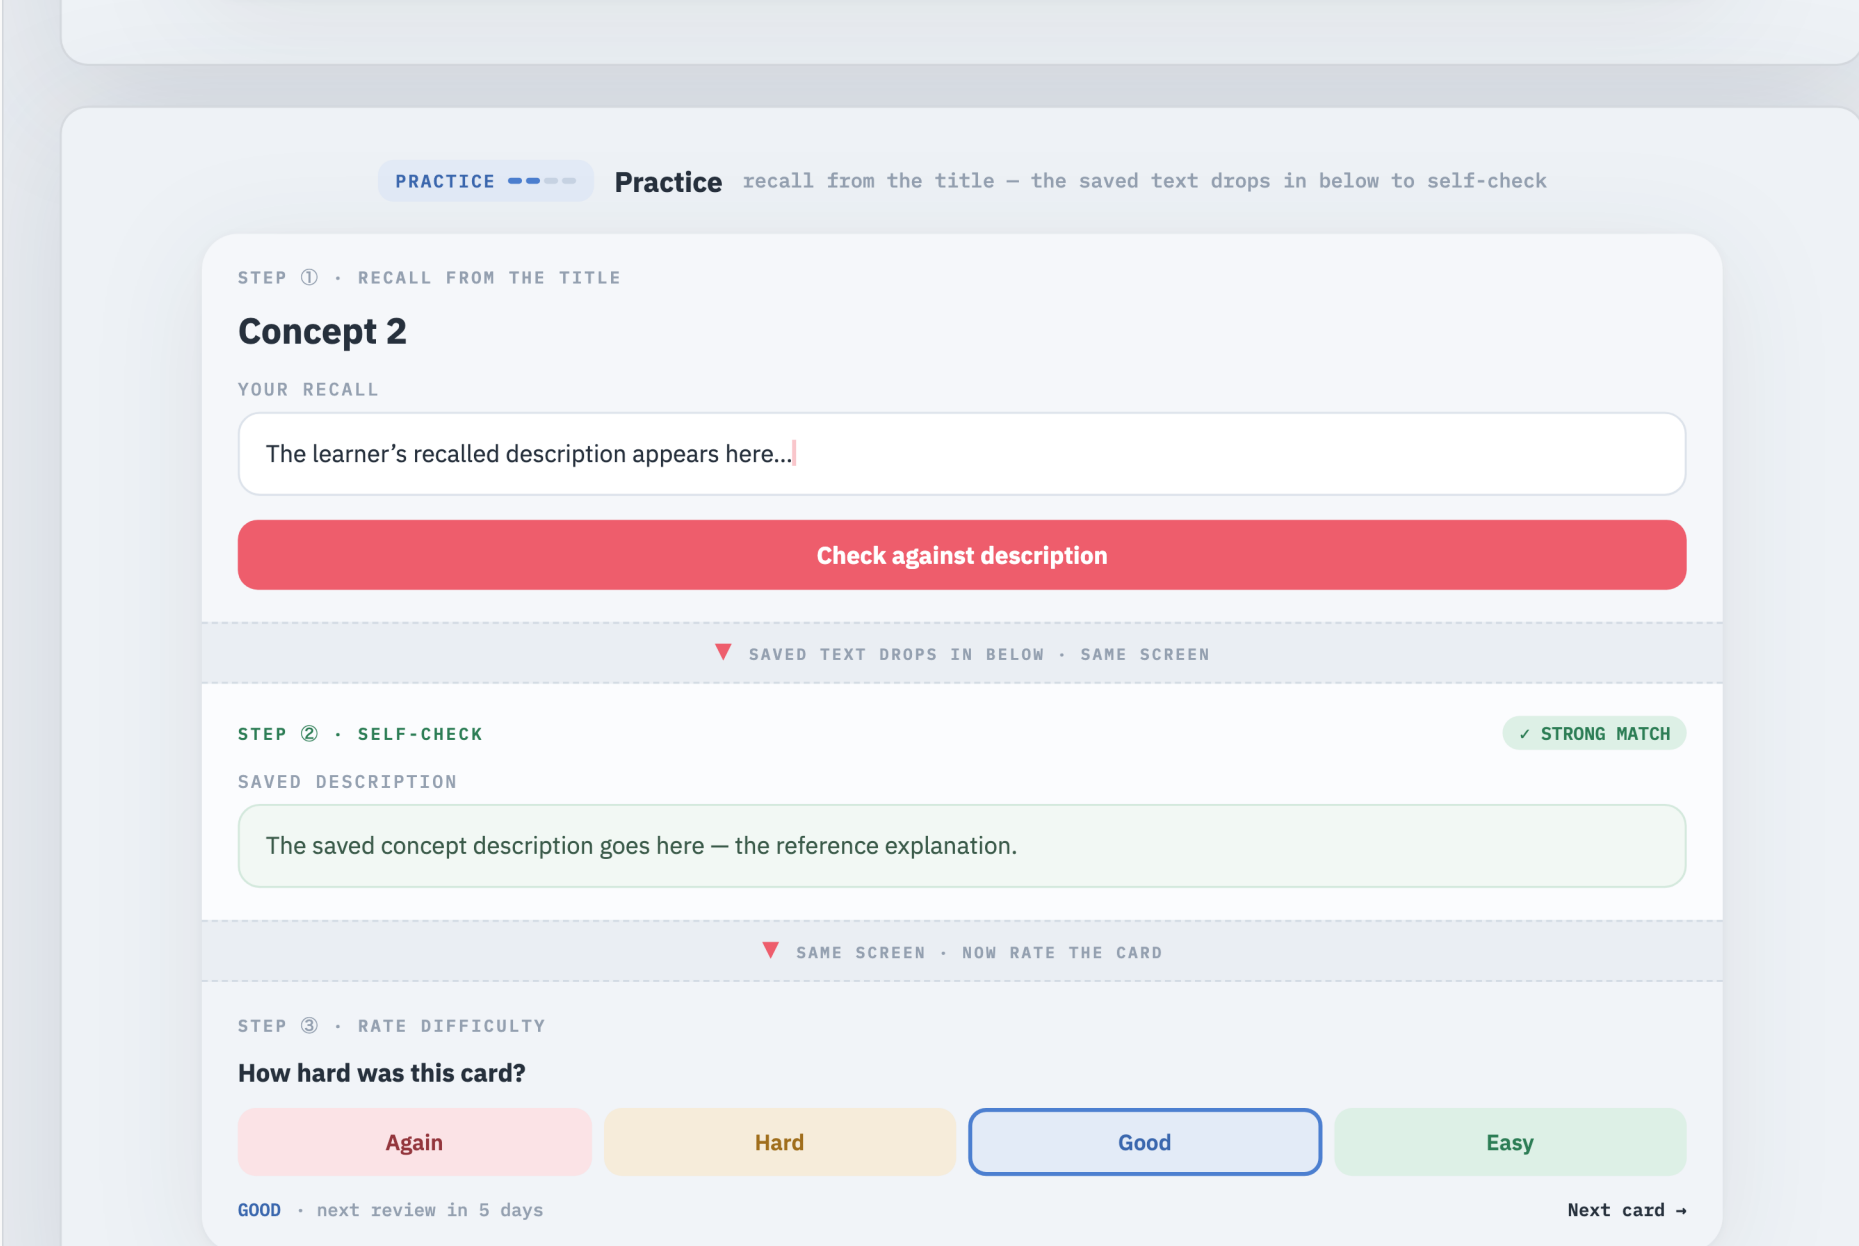

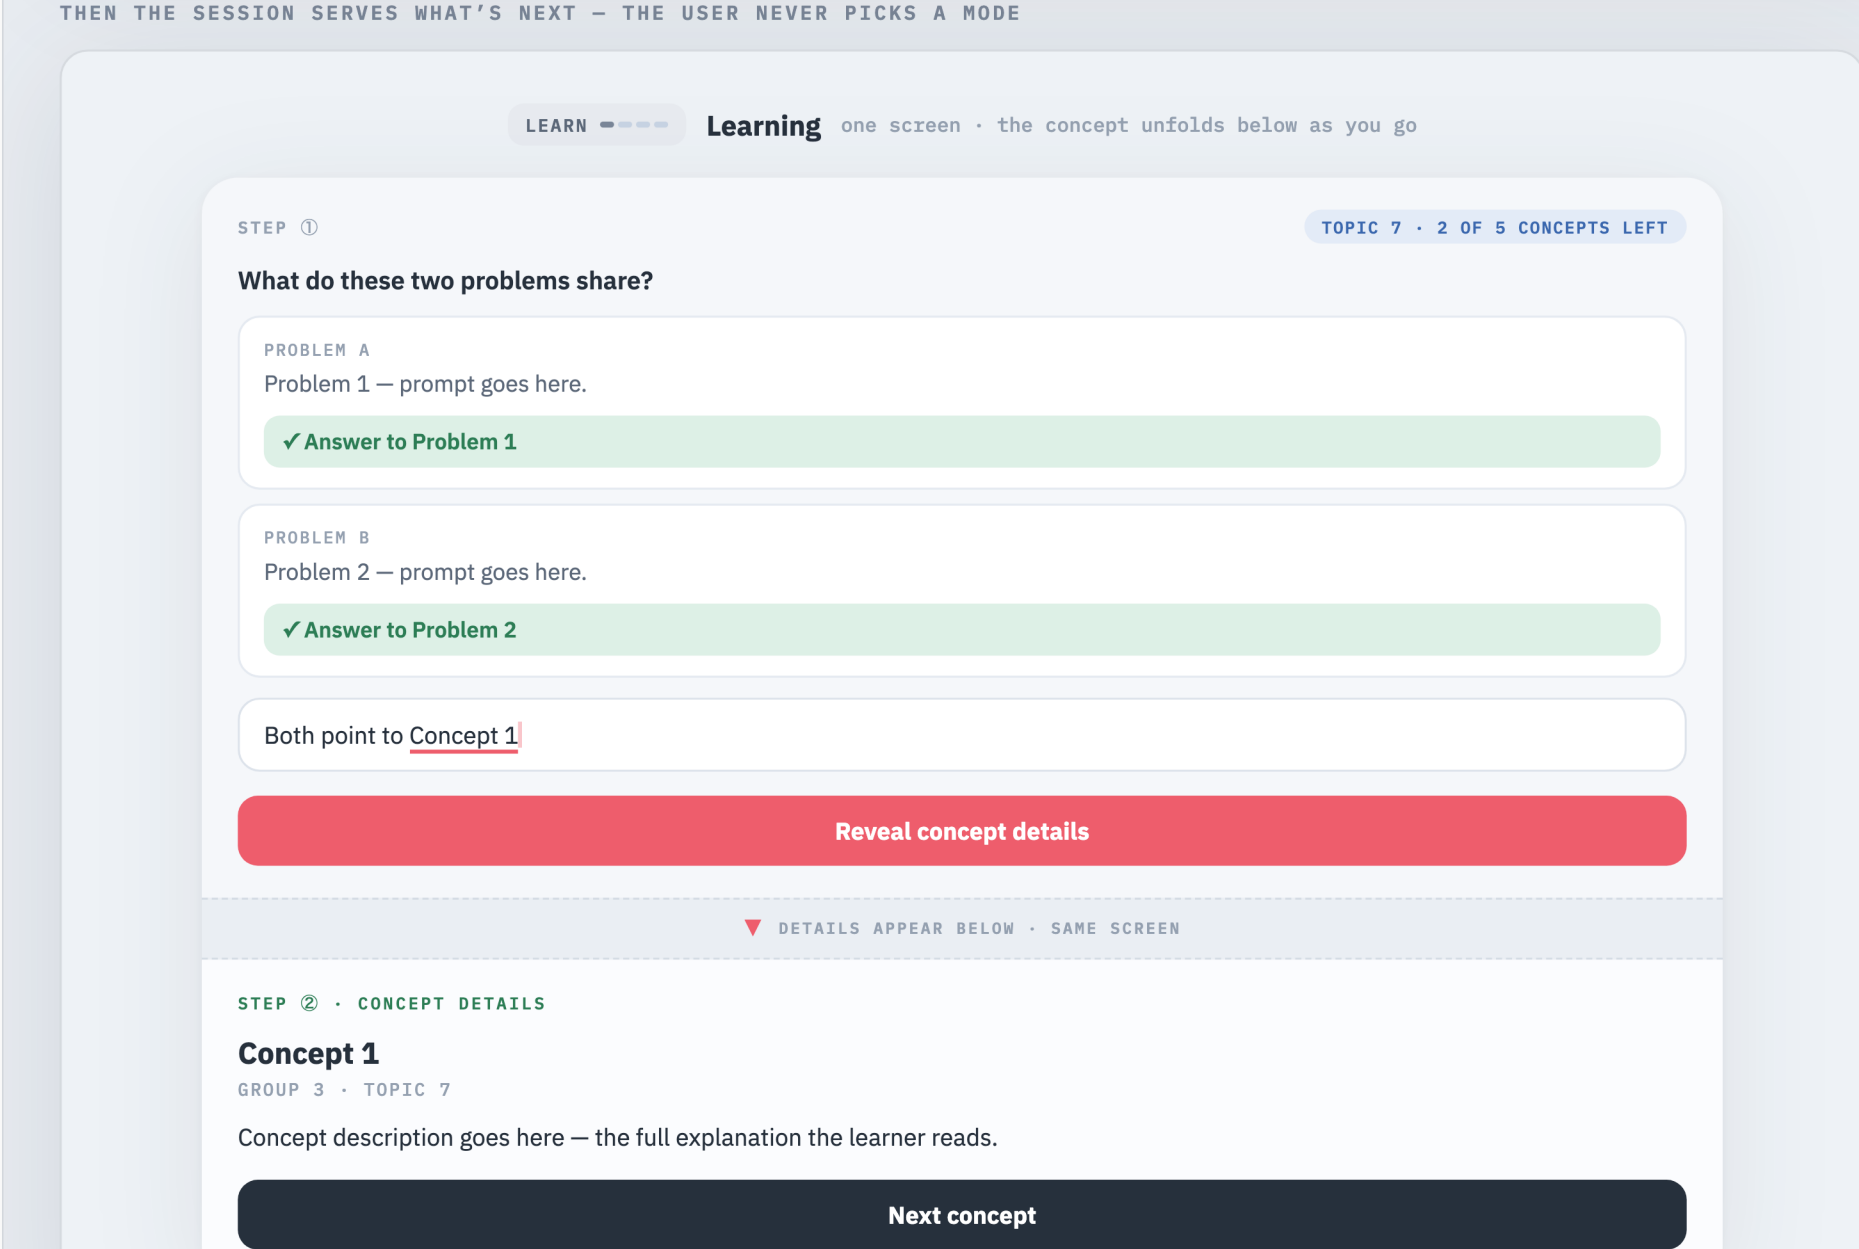

2b Study screen – three dials + centered visual concept tree – options menu opens Anki options (deck options, custom study)

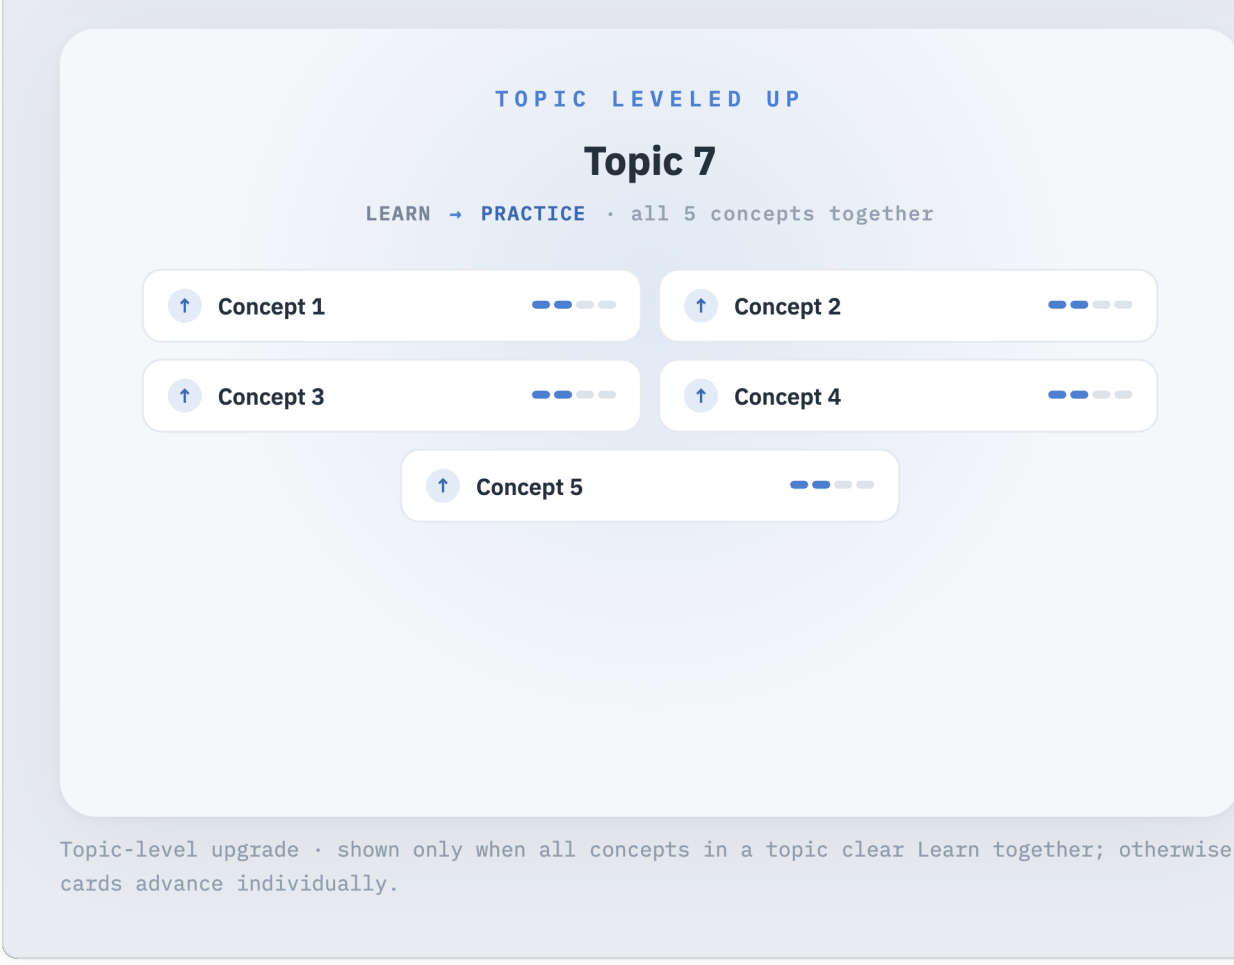

2c Study session – new-topic intro as a centered tree, then the flow

THEN THE SESSION SERVES WHAT'S NEXT – THE USER NEVER PICKS A NODE

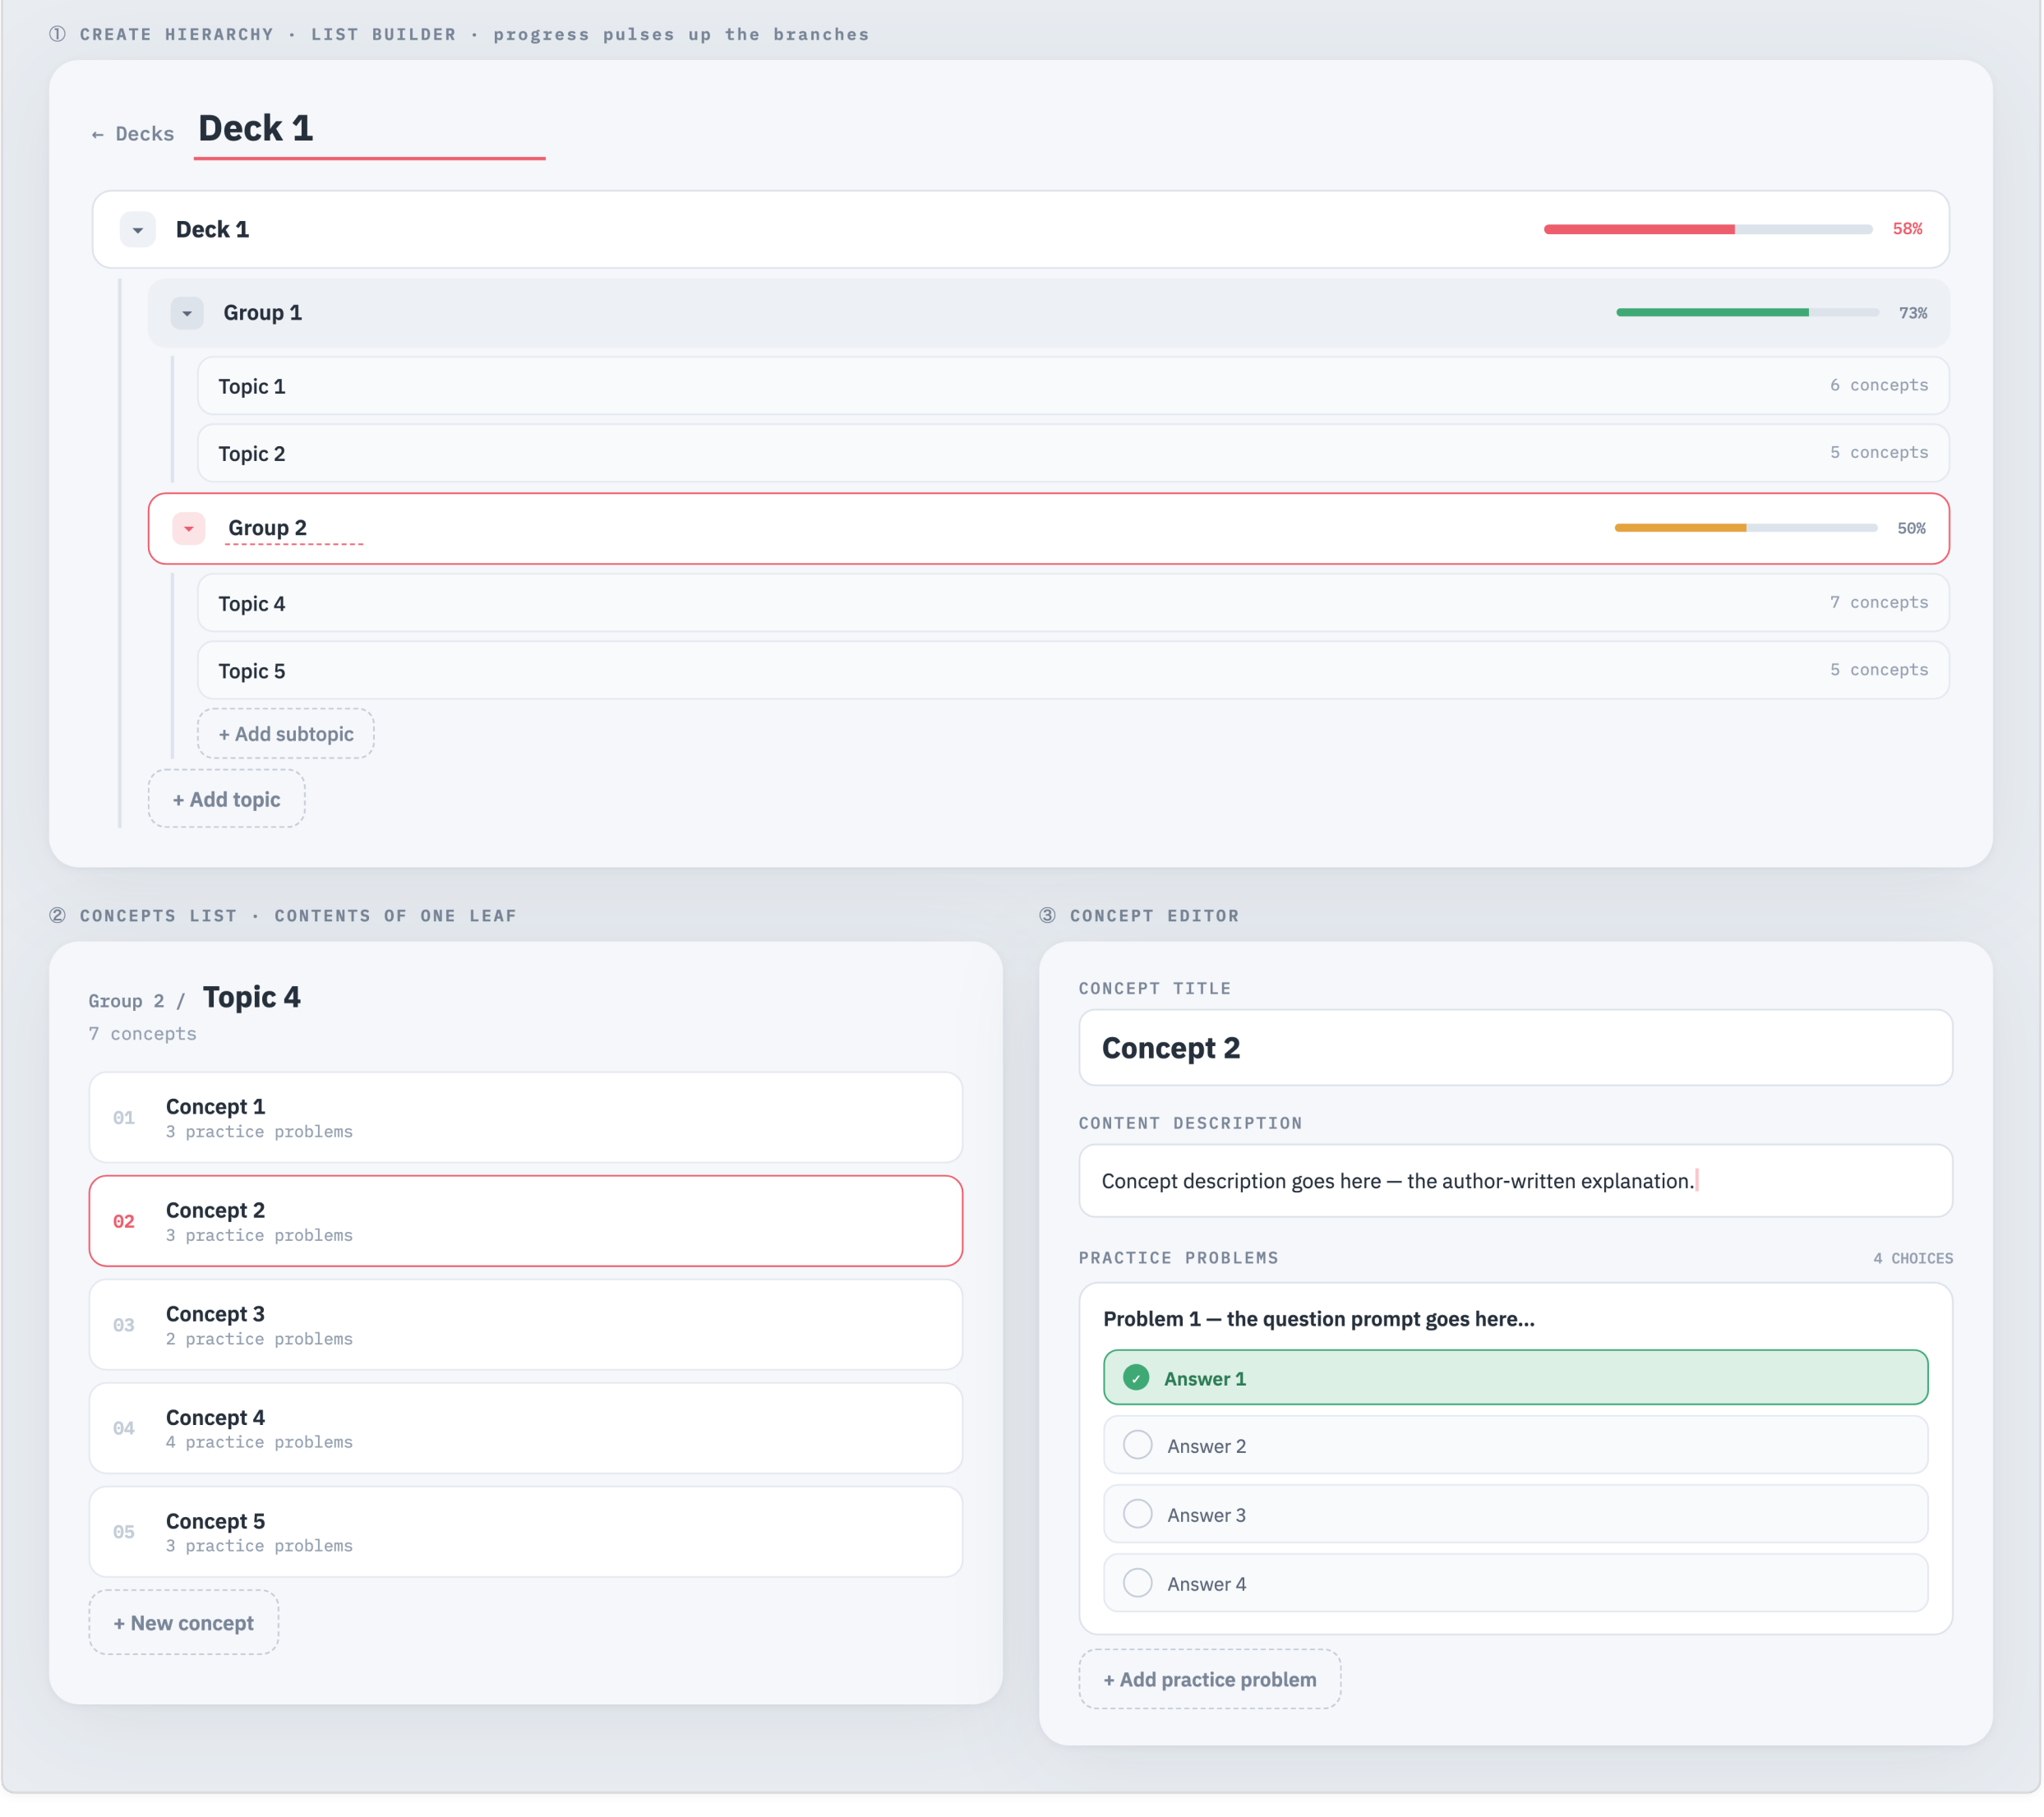

Level-up · a card usually upgrades individually; when every concept in a topic clears learn, they upgrade together.

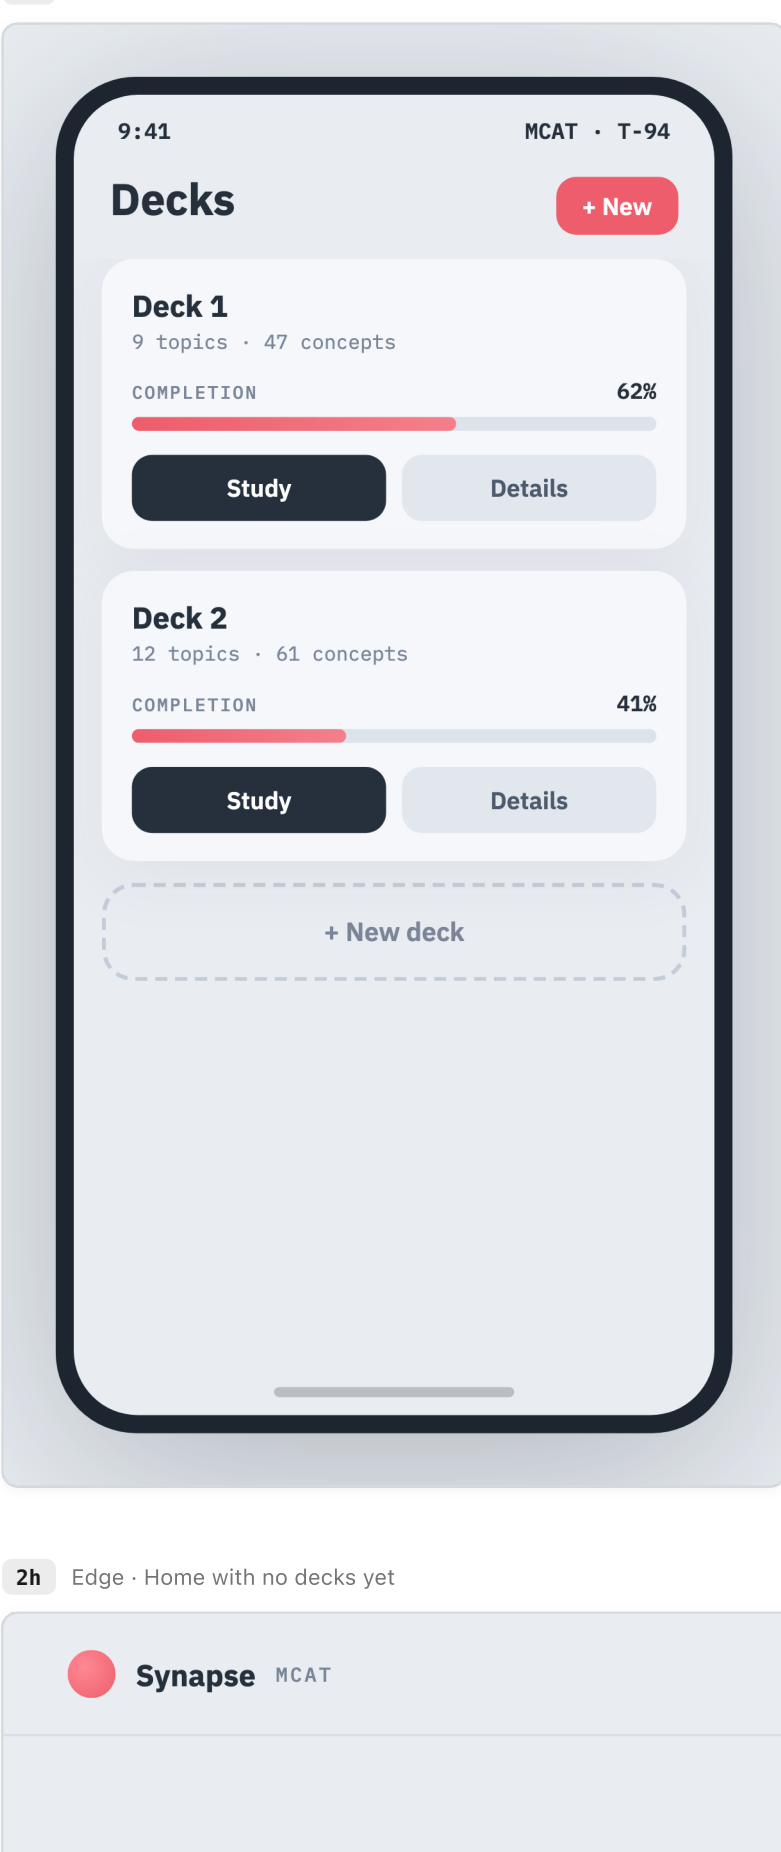

Topic-level upgrade · shown only when all concepts in a topic clear learn together; otherwise cards advance individually.

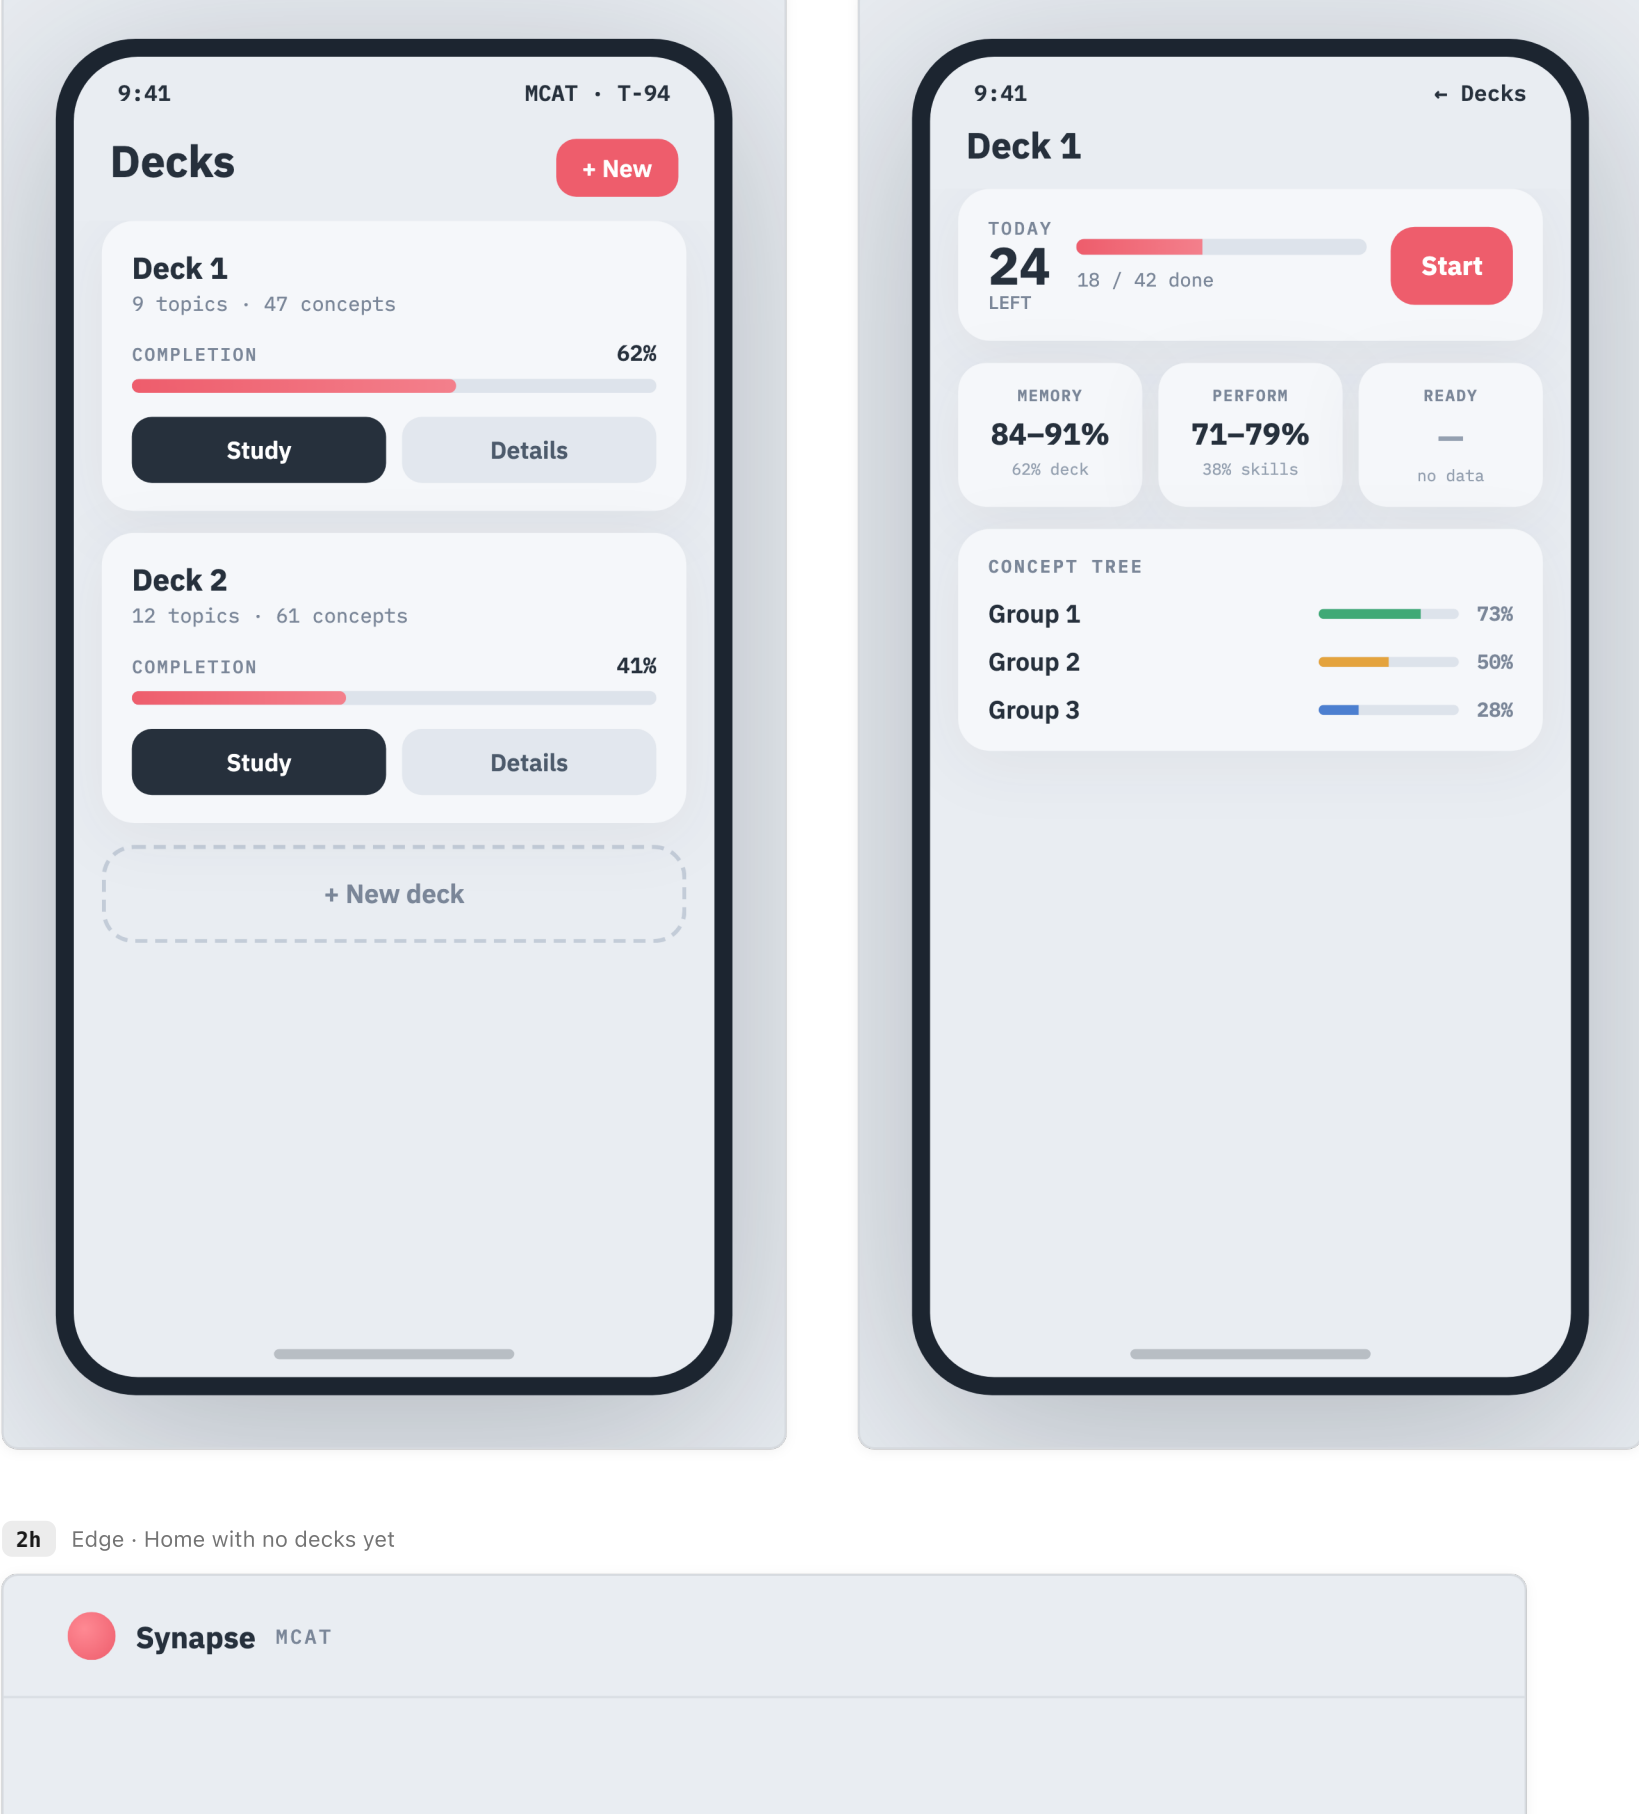

2d Deck builder – create hierarchy (list) · concepts · concept editor

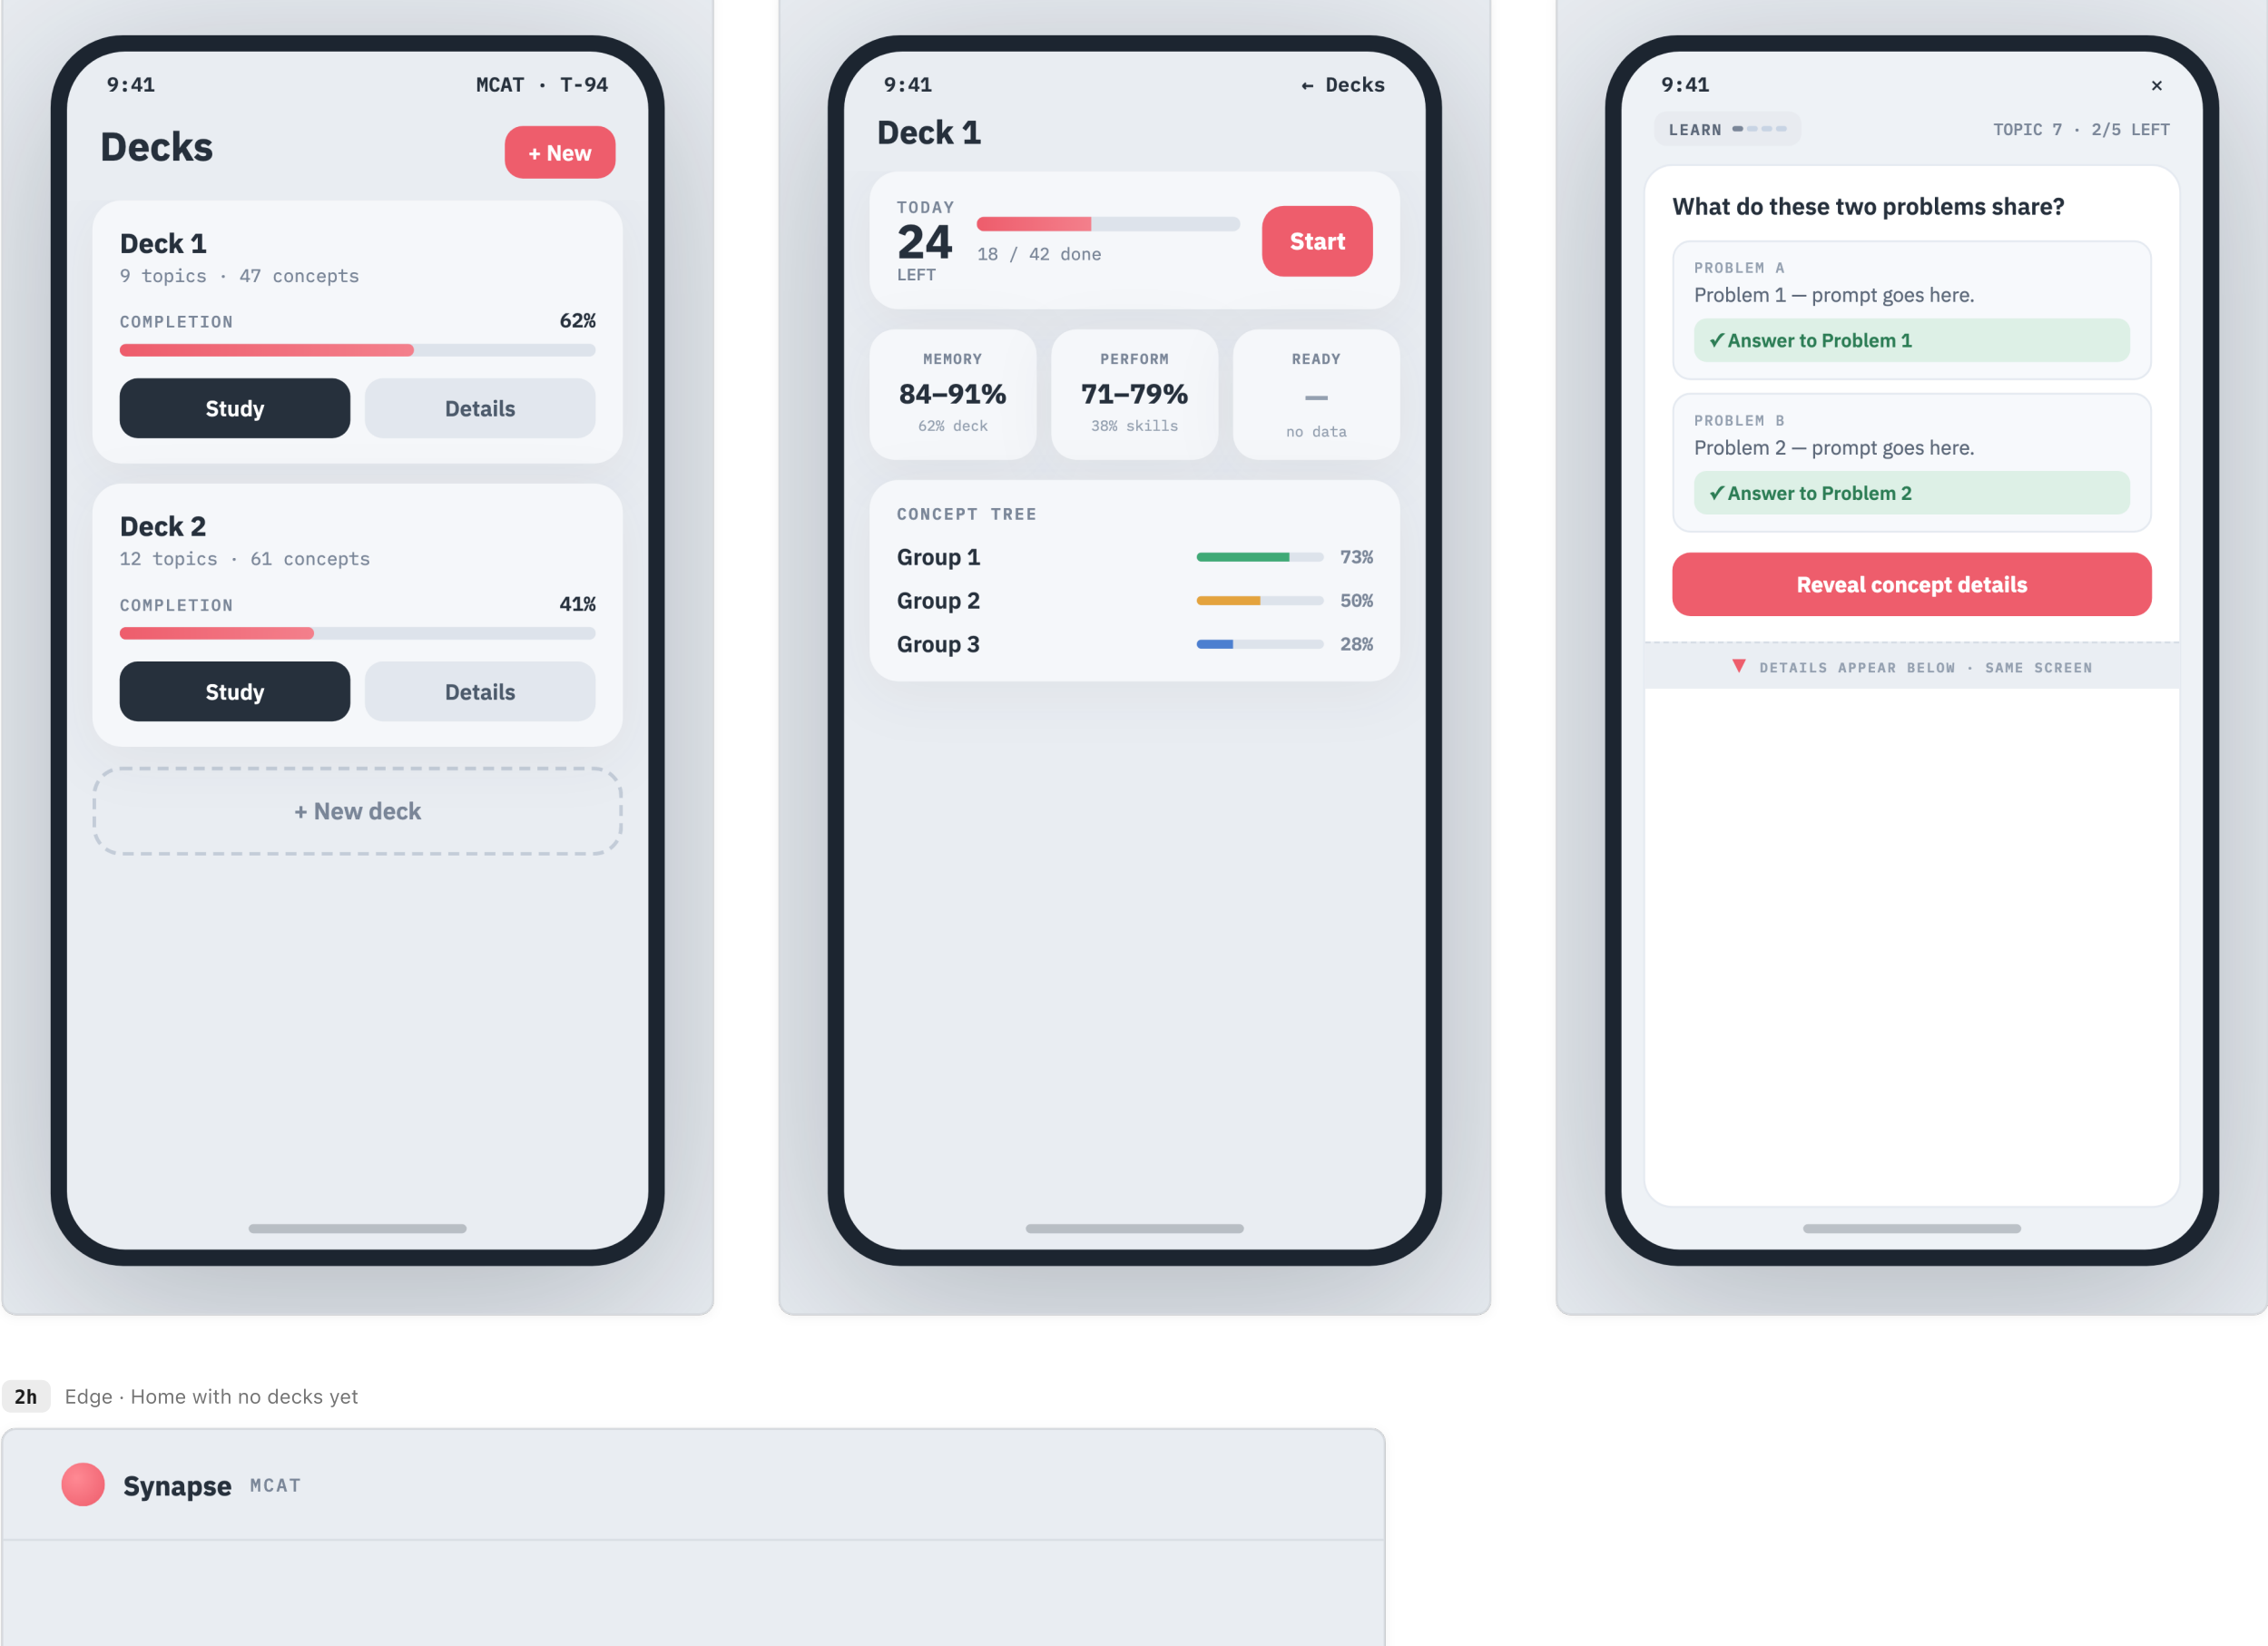

2e Phone · Decks (home)

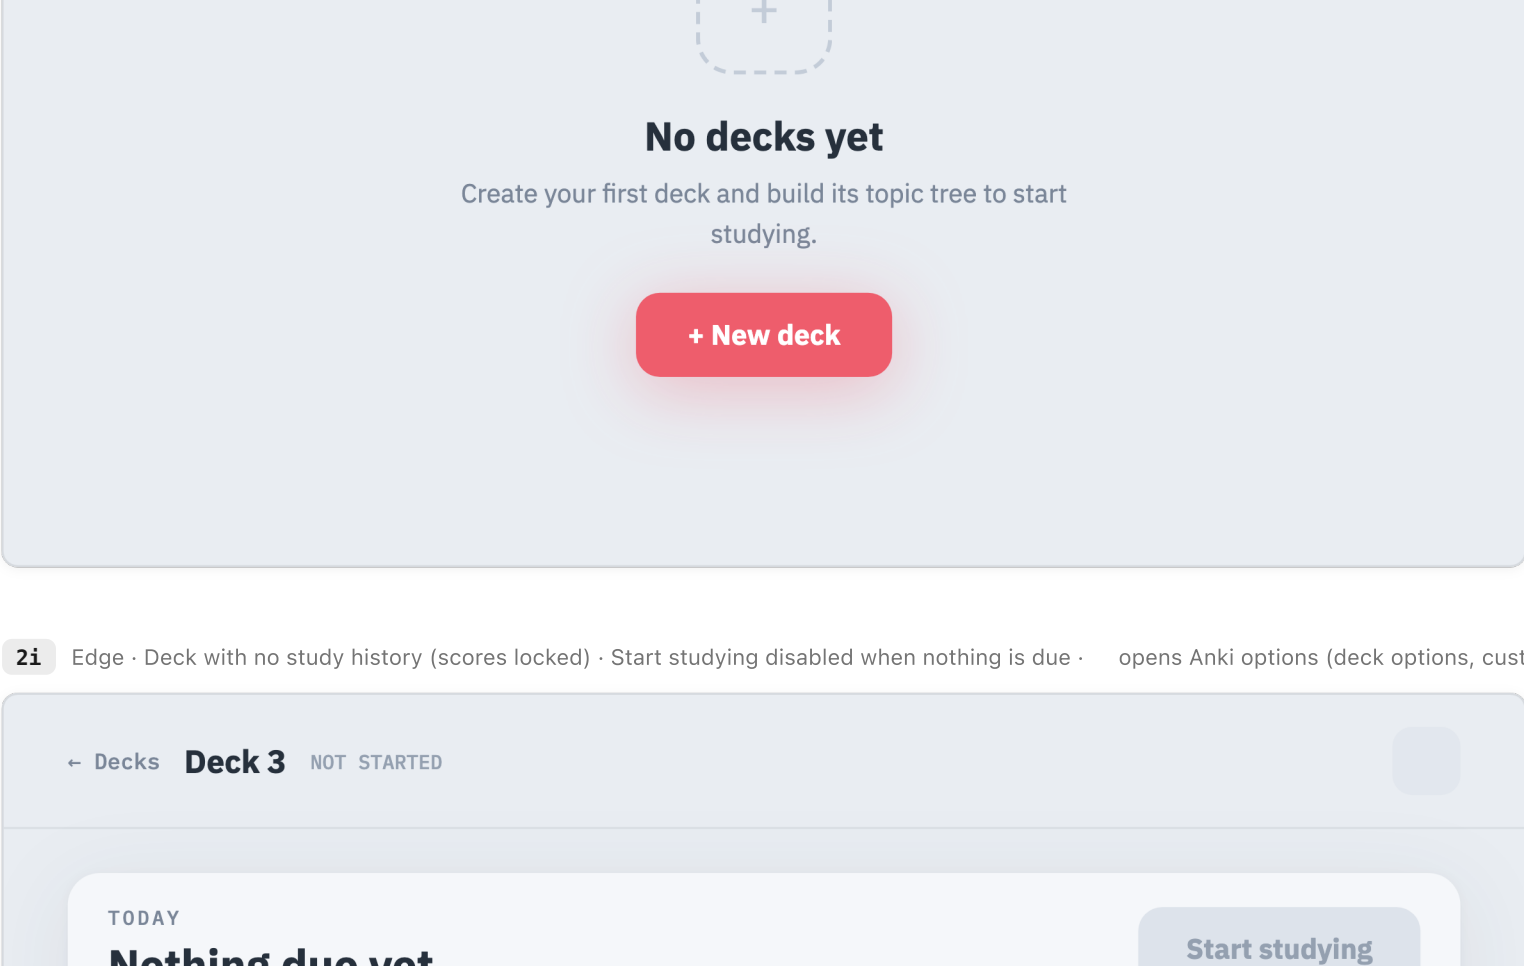

2f Phone · Study

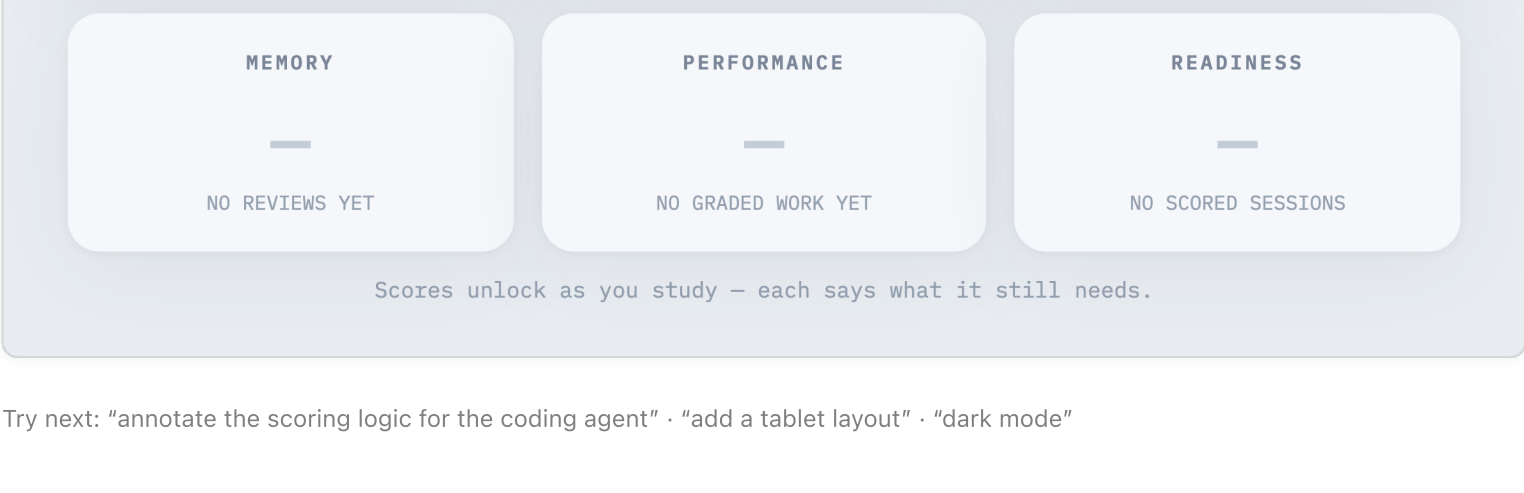

2g Phone · Session (a card)

2h Home with no decks yet

2i Edge · Deck with no study history (scores locked) · Start studying disabled when nothing is due · opens Anki options (deck options, custom study)

2j Edge · Guided, wrong pick → correction
